Experience

Meta — New York, NY
Senior Software Engineer — *Jul 2021 - Present*

Instagram Small Business Growth

- Lead multiple engineering workstreams for Instagram Boost, Instagram's in-app advertising platform for SMBs, owning product direction and technical execution while scoping and delegating projects across multiple engineers
- Drove $10M+ in incremental revenue across advertiser acquisition, ad creation, and campaign management features built in PHP/Hack and Python
- *Selected Projects:*
  - **Campaign Scaling**: Led design and implementation of ML-driven campaign scaling, using model predictions to identify high-performing ad campaigns and building backend eligibility logic, APIs, and end-to-end UX for increasing budgets and/or extending campaign durations
  - **Boost Media Recommendations**: Owned end-to-end development of media recommendations using Instagram Insights APIs to compare organic posts with historical performance across engagement metrics and time windows, highlighting promising posts for advertisers to boost

Instagram Ranking Systems

- Built ranking infrastructure for Instagram Reels, Explore, and Feed using Python
- Increased overall Instagram time spent by 0.1%+ through Reels ranking improvements, including personalized ranking parameters, real-time signal integration, and pagination optimizations
- Reduced Meta compute capacity usage by hundreds of kW through off-peak ranking precomputation, caching optimizations, and lower-cost ranking queries

Waymo — (Remote) Mountain View, CA
Software Engineer Intern — *May 2020 - Aug 2020*

- Developed simulation tooling for testing Waymo's autonomous vehicles using Python and C++
- Integrated an analytics platform into simulation A/B tests, improving visibility into simulation results and testing efficiency

Facebook — San Francisco, CA
Software Engineer Intern — *Jan 2020 - Apr 2020*

- Redesigned Instagram's image upload pipeline on the Media Creation Infrastructure team, reducing server-side latency by 15% across all Feed, Stories, and Direct image uploads
- Upgraded the Instagram Ads video encoding pipeline to improve video quality, increasing ad revenue by 0.1%+ versus previous encodings

Google — Sunnyvale, California
Software Engineer Intern — *May 2019 - Aug 2019*

- Built automated security testing infrastructure for Google Cloud Platform in Python, including a tool using Hypothesis to identify data exfiltration paths across security-compliant Cloud APIs

Education

University of Illinois at Urbana-Champaign — Champaign, Illinois
Master of Computer Science • GPA: 3.91 — *Aug. 2020 - May. 2021*
B.S. in Computer Science • GPA: 3.91 • James Scholar • Dean's List — *Aug. 2017 - May. 2021*

Coursework: Advanced Distributed Systems, Machine Learning, Artificial Intelligence, Databases, Operating Systems

Activities: Graduate Teaching Assistant for Data Structures and Computer Architecture, Mobility and Fall Prevention Lab Student Researcher, Reflections | Projections Tech Conference Staff

Programming Skills

Languages: Python, C++, PHP/Hack, Java, C, JavaScript

Frameworks & Tools: Django, Node.js, Express.js, MongoDB, MySQL, React
